

YOUR TRUSTED PARTNER SINCE 1996

About Us

As Vancouver's premiere hazardous materials removal company, we have been successfully completing projects both large and small for nearly two decades. Our mission is to safely remove hazardous materials from residential, commercial, and industrial buildings to ensure the well-being of all its occupants. We work closely with our customers to develop the most cost-effective and efficient removal solutions that assist them in completing their project on-time and on-budget.

We're able to accomplish this by streamlining the hazardous materials removal process from beginning to end, with innovative technology, safe and cost-effective removal solutions, and vertically integrated services that create value for our customers.

Our History

Phoenix Enterprises Ltd was founded in 1996 with the purpose of eliminating hazardous materials. Over the past 20 years we have grown in expertise and experience to become one of the top hazardous material removal companies in the province. Today, we maintain that same dedication towards keeping our province safe.

Our owners began working in the industry during the 1980s, when the Workers Compensation Board introduced regulations to help control asbestos use and removal. This experience has given us the knowledge and ability to remove all forms of hazardous materials ranging from residential to industrial sized jobs. We also carry comprehensive insurance coverage to ensure that our clients are protected. Phoenix Enterprises is bonded and carries Pollution Liability Insurance.

Why Choose Phoenix?

Operating in BC for over 20 years, with a commitment to:

- Ensuring the safety of our clients and our workers
- Completing the job in the most cost-effective manner
- Causing minimal disruption for the occupants of the building
- Finishing the project on time and on budget
- Making contaminated buildings comfortable to live and work in

Offering innovative solutions that cover the entire hazardous material removal process from beginning to end:

- Asbestos Abatement
- Mould Remediation
- Vermiculite Removal
- Clean and ACM Demolition
- Lead Paint Removal
- Disposal

"Phoenix was very professional throughout all stages of the asbestos removal process. Phoenix used a Vec Loader (a giant vacuum) that sits outside the house. The job was completed on time and I would not hesitate to recommend this company again."

- Colleen Doty
Homeowner, Vancouver

"Working In Partnership To Eliminate Hazardous Materials."

Our Services

We at Phoenix Enterprises understand the importance of living in a safe home. We spend most of our day in our homes, we cook meals, we do homework, we raise a family, we sleep, we have movie nights and we celebrate milestones. Our home is the one constant in our ever changing, fast-paced lives. We believe that a safe home can help create happy and healthy lives. Our expertise and experience make us a leading company in the hazardous materials removal industry. Our competencies and aim for total client satisfaction push us towards new innovations which lead to efficient and cost-effective removal methods.

Asbestos Abatement

01

Homes built before 1990 may contain asbestos. Our asbestos removal methods are the most advanced and safest available. Our technology allows us to safely remove asbestos during renovations with minimal impact on the daily activity of households.

Vermiculite Removal

02

What's in your insulation? Our Vec-loader technology is the safest way to remove vermiculite, both for those occupying the home and for those doing the work. Our vacuum trailer ensures that no hazardous particles can escape during the vermiculite removal process.

Mould Remediation

03

Warm and damp conditions in your home could be causing mould to grow. Our ice blasting equipment has the capacity to clean mould and eliminate any stains it may have caused to surfaces such as plywood and concrete.

Lead Abatement

04

We will finish the project safely and efficiently. We have worked on large lead abatement projects throughout the lower mainland and our professionals are very experienced in dealing with the material. Lead can be highly toxic and should be removed by a professional.

Storage Tank Removal

05

We offer complete underground storage tank (UST) removal services from residential and commercial properties. This includes the removal of the tank contents, tank removal, soil remediation, back fill and complying with all legislative requirements for provincial and federal governments.

Demolition

06

With our diversified equipment and bin services, we offer a full line of both hand demolition and heavy equipment machine demolition to suit all of your residential and commercial needs. We are experienced in completing both hazardous and non-hazardous demolition projects.

Disposal

07

Your walls may be hiding asbestos. We are one of the few hazardous material removal companies in the province to be licensed by the Ministry of Environment to transport and store hazardous waste.
